Investment policy

OTP Multi-Asset Dynamic Fund is member of a product family called OTP Multi-Asset Funds. The fund units are issued in euro, the fund invests in numerous other investment funds. Thanks to the fund of funds structure, you can build a well diversified international securities portfolio by investing in a single investment fund.

The OTP Multi-Asset Funds include both active and passive strategies in each asset class. We select actively managed equity funds, that may overperform their category peer group thanks to their competent. We select funds with better past performance and lower volatility according to the appropriate risk management strategy. The funds are selected based on both quantitative and qualitative aspects, relying on the knowledge of the investment process.

The funds seek global exposure to both equity and bond markets. This means, that in addition to all American and European exposure, the funds also include a smaller proportion of emerging markets. However, the focus is on the major markets.

Composition of OTP Multi-Asset Dynamic Fund of Funds:

2% bond
76% equity
22% alternative assets

Monthly statement

In March, equity markets continued their five-month rise, while bond markets stagnated. During the period, better-than-expected economic growth data have been released; as a consequence, investors scaled back their expectations of interest rate cuts. Despite slightly worse-than-expected inflation and higher employment data, the Fed chairman stuck to Fed's forecast of three rate cuts for this year, which was not welcomed by the bond market. Despite these events, the rising geopolitical risks had a positive impact on the gold price, which rose nearly 9% during the month. In the Eurozone, the first rate cut is expected to happen in June, driven by weak economic growth and falling inflation. The stock market experienced another great month. Market rallies were broad-based, concerning both the sectors and countries as well. The biggest increases were recorded by European stock markets, with the Spanish, Italian and German all going north strongly. In Europe, the strongest sector was the banking and the retail trade, while in the US the energy and materials were the leading sectors of the market, with the technology sector lagging behind. The rally took place with low volatility, so our volatility control sub-strategy added to the Fund's equity weighting. We also bought developed market healthcare sector exposure, as we believe the sector is trading at a favourable valuation. Among our alternative exposures, the price of the Treasures of the Earth Fund slightly declined, while the price of gold rose significantly (+8.71%) over the period.

Annualized past performances

Annual returns*	1Y	3Y	5Y	10Y	From launch
Fund	15.83%	n.a	n.a	n.a	14.00%
