

1. Download

Search for the ViCA application at Play store.

2. Installation

3. Set password

Set an application password (input and confirmation).

You have to enter this password upon starting ViCA application.

The strongness of the password is represented by a colored indicator under the input fields. The more longer and complex the password is, the more safer.

The password is stored only after a successful registration. If the registration process has been interrupted the application will asking for set the password again.

If your device allows it and you make a declaration, you can later change the use of a password to a biometric identification method.

Biometric identification

It is available to use biometric identifiers (fingerprint, FaceID) stored on the mobile device instead of ViCA application password.

To enable biometric identification accept the declaration.
